

TRIPOD

- Make sure that you select strong, straight sticks, and trim them carefully.
- A gadget is only good if it is useful, so remember to make your tripod high enough to be comfortable and wide enough to hold the dish that you wish to use in it. If your long poles are about 1 - 1.2 metres long, your tripod should be about waist high and hold an average sized enamel dish. People do vary in height, so try your own measurements as a guide.
